

March 31st WFH and learning update

Dear all,

We hope you are all well. There are a few ideas below for home learning. Since we closed we have been sending Curriculum Updates (your child's class website page) and also ideas for home learning via a Parentmail e-mail. All of these ideas are about 'reinforcing', learning and 'practising' (which is really good and something that could really benefit your child regardless of age or ability).

If we are still closed after the Easter holidays (which is expected although we have no information as yet, I will inform you via Parentmail as soon as we have CONFIRMED information) then we will need to introduce some new learning.

I have asked the teachers to put some new learning concepts and objectives on their next Curriculum Update after the Easter holidays and to give you some clear structure so it is a bit easier. As you are working in a different environment in a different way the morning could be learning around table and the afternoon more free flowing, remember it is just as intense for your children as it is for you !!

Found this very relevant quote (this is regardless of age, ability or perception):

"Mastery comes from practice, practice comes from playful, compulsive experimentation & the sense of wonder."

We hope you are enjoying your time with your children and learning together.

Practise the core skills (handwriting, spelling, phonics, tables, numbers, language, general knowledge (capital cities/countries) etc).

Maths

ise emaths.com

Science

More ideas attached (with some American spelling).

Enjoy today

Best wishes

Mr Batstone
