

An anatomical diagram of the human torso showing internal organs. The diagram is a simplified, stylized representation of the human body, with a grey outline of the torso and arms. The internal organs are color-coded: the brain is pink, the lungs are yellow, the heart is red, the stomach is blue, the liver is green, the pancreas is light blue, the spleen is orange, the kidneys are brown, the intestines are brown, and the bladder is yellow. Leader lines extend from the organs to the right, where they would connect to labels in a full diagram.
